See footnotes on next page.

¹ Medians are calculated using \$2,500 income intervals. Beginning with 2009 income data, the Census Bureau expanded the upper income intervals used to calculate medians to \$250,000 or more. Medians falling in the upper open-ended interval are plugged with "\$250,000." Before 2009, the upper open-ended interval was \$100,000 and a plug of "\$100,000" was used.

² Data have been revised to reflect a correction to the weights in the 2005 ASEC.

³ Implementation of a 28,000 household sample expansion.

⁴ Implementation of Census 2000-based population controls.

⁵ Full implementation of 1990 census-based sample design and metropolitan definitions, 7,000 household sample reduction, and revised editing of responses on race.

⁶ Introduction of 1990 census sample design.

⁷ Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 ASEC was revised to allow for the coding of different income amounts on selected questionnaire items. Limits either increased or decreased in the following categories: earnings limits increased to \$999,999; social security limits increased to \$49,999; supplemental security income and public assistance limits increased to \$24,999; veterans' benefits limits increased to \$99,999; child support and alimony limits decreased to \$49,999.

⁸ Implementation of 1990 census population controls.

⁹ Implementation of a new CPS ASEC processing system.

¹⁰ Recording of amounts for earnings from longest job increased to \$299,999. Full implementation of 1980 census-based sample design.

¹¹ Implementation of Hispanic population weighting controls and introduction of 1980 census-based sample design.

¹² Implementation of 1980 census population controls. Questionnaire expanded to allow the recording of up to 27 possible values from a list of 51 possible sources of income.

¹³ First year medians were derived using both Pareto and linear interpolation. Before this year, all medians were derived using linear interpolation.

¹⁴ Some of these estimates were derived using Pareto interpolation and may differ from published data, which were derived using linear interpolation.

¹⁵ Implementation of a new CPS ASEC processing system. Questionnaire expanded to ask 11 income questions.

¹⁶ Full implementation of 1970 census-based sample design.

¹⁷ Introduction of 1970 census sample design and population controls.

¹⁸ Implementation of a new CPS ASEC processing system.
